

Progress Report

April 22, 2022 - Pranav Bangarbale

This week + Anticipated Next Week

- Current results are with pure bootstrapping (resetting weights in between replicas)
- Based on what was discussed in the last meeting, worked on generating results without pure bootstrapping —> weights are not reset in between replicas
- Generated results for reduced-phi and baseline angles, working on even-phi and generating finalized plots & statistics
- For next week, will present all plots/statistics for pure bootstrapping and without pure bootstrapping (comparison)
