## Line Chart

## Spreadsheet Format

Each row represents data points with a shared $x$-axis value. Learn more about spreadsheets in Visuals at Use Spreadsheet Data.

|  | Column 1 | Column 2 | Column 3 (and beyond...) |
| :--- | :--- | :--- | :--- |
| Data <br> Type | number | number | number |
| Contents | The x-axis <br> value of the <br> data point. | The y-axis value of the data point. <br> This column creates a line on the <br> chart. | The y-axis value of a second data point (with the same x-axis as <br> Column 1). This column adds an extra line on the chart. <br> Note: <br> - You can have as many additional columns as you need. <br> Each column adds a new set of $y$-axis values, and creates <br> an extra line. |
| Required $x$ | $x$ |  |  |
