Visuals (definition)

Visuals lets you make interactive data visualizations. The application is part of the broader Mandala Suite of Tools: you can use it at visuals.shanti.virginia.edu.

Visuals integrates with your Google Drive. To make a visualization, you first create a data spreadsheet in Google Sheets, then add it to Visuals. Each chart type has different data format rules, which you can learn about at the Visualization Index. You can then share your graph with viewers outside and inside Mandala.
