

Line Chart

Spreadsheet Format

Each row represents data points with a shared x-axis value. Learn more about spreadsheets in Visuals at [Use Spreadsheet Data](#).

	Column 1	Column 2	Column 3 (and beyond...)
Data Type	number	number	number
Contents	The x-axis value of the data point.	The y-axis value of the data point. This column creates a line on the chart.	The y-axis value of a second data point (with the same x-axis as Column 1). This column adds an extra line on the chart. Note: <ul style="list-style-type: none">You can have as many additional columns as you need. Each column adds a new set of y-axis values, and creates an extra line.
Required	x	x
