

# Choose Colors

Whenever you have color options in the visualization editor, you can use the color picker. A square color icon next to the field marks the color picker.

## Choose Colors

1. Click the colored square in the field that you are working on
  - The Color Picker will appear
2. Click a color on the color wheel or the color tabs
  - The color you picked will show up in the preview pane; its hex triplet will appear in the center of the color wheel
3. Change the color's saturation using the left slider bar
  - Pull the slider down to make the color fainter
4. Change the color's brightness using the right slider bar
  - Pull the slider down to make the color darker
5. Click on **OK** to close the Color Picker
  - The color of the visualization feature will change

## Choose Harmonious Colors

1. Click the colored square in the field that you are working on
  - The color picker will appear
2. Select a base color
  - The color picker will show you what colors match this base in the next step
3. Click **Schemes**
  - Several types of schemes will appear
4. Select a color from the scheme options
5. Click **Ok**
  - The scheme color you chose will apply to your visualization feature
