

# Add Metadata Information

Metadata is descriptive information about your visualization. Metadata helps viewers find and understand the resource. We've included a complete description of each metadata field below.

If you want help customizing your visualization, check out the [Visualization Index](#).

## Detailed Steps

1. Either [create](#) or [edit a visualization](#)
2. Scroll down the page, past the visualization entry form
3. Fill in a description for your visualization
4. Connect your visualization to other resources with Knowledge Maps
  - Subjects and Places are both Knowledge Maps; [learn more](#)
  - Click the search bar for subjects or places to find and browse Knowledge Maps
5. Add a thumbnail preview
  - a. Click **Choose file**
  - b. Open your thumbnail from the file browser
  - c. Click **Upload**
    - You'll see your thumbnail and new metadata fields
  - d. Enter the alt text and title for your thumbnail
6. Choose your visibility settings
  - Switch this to **Public** if you want everyone to see your visualization; visualizations are **Private** by default
7. Click **Save**
  - [Metadata will show below your visualization](#)

## Field Steps

Field	Description	Type
<b>Title</b>	The title for the visualization	short text
<b>Type</b>	The type for your chart. See the <a href="#">Visualization Index</a> or <a href="#">Choose a Visualization Type</a> for information about each type.	controlled vocabulary
